

Peter Wainaina

Systems-Oriented Web Developer

Nairobi, Kenya | wainainagathecha@gmail.com | github.com/WainainaGathecha | my-portfolio-p2xe.vercel.app

PROFESSIONAL SUMMARY

Systems-oriented Web Developer with production experience building responsive, data-driven, and highly accessible web applications from design through to deployment. Transitioning frontend proficiency into robust full-stack architectures using [Node.js](#) and Prisma. Specialized in web performance optimization, UI rendering lifecycles and component-driven architecture. Self-directed and highly disciplined in fully remote, asynchronous development environments.

TECHNICAL Core

Languages: JavaScript (ES6+), TypeScript, HTML5, CSS3/SCSS

Frameworks & Component Libraries: React, Tailwind CSS, Zustand, shadcn/ui

Backend & Tools: [Node.js](#), Express, Prisma. SQL (PostgreSQL, SQLite), Vite, Vitest

Workflow & DevSecOps: Git, GitHub Actions (CI/CD), Vercel, automated testing

Concepts: DOM manipulation, Responsive Interface Design, RESTful API Integration, Data-Driven Rendering, Core Web Vitals Optimization, SEO, Accessibility (A11y fundamentals), Project Scoping

Featured Production Experience

Frontend Engineer | Smart Kings Auto Tyres (E-commerce Platform) smartkingsautotyres.co.ke 2026

- **Engineered a complex multi-criteria search and product filter system** handling hundreds of unique SKU variants, ensuring instant, data-driven UI rendering and zero layout shifts (CLS)
- **Owned end-to-end client delivery**, translating fluid business guidelines into precise technical requirements and successfully managing stakeholder trade-off discussions regarding technical feature scoping.
- **Optimized mobile performance and core web vitals**, cutting asset render-blocking times by 2.2 seconds through strategic script deferrals, font optimization and critical path CSS inlining.
- **Configured robust technical SEO infrastructure**, implementing canonical tags, meta tags, and Open Graph protocols to optimize organic search engine indexing

Full-Stack Developer : CineWatch (Dynamic media platform) <https://cinewatch-green.vercel.app/> 2026

- **Architected a mobile-first movie discovery application** backed by modular, decoupled component architecture and unified client-side state management using Zustand.
- **Built a custom Node.js , Express, and Prisma backend pipeline** to manage secure, localized user schemas, database connections and asynchronous API data orchestration.
- **Optimized asynchronous data flow and integrated robust error handling** for dynamic movie-detail routing, successfully interfacing with third-party REST endpoints (TMDB API)
- **Implemented comprehensive testing and automated workflows**, writing functional test suites with Vitest and deploying a GitHub actions CI pipeline to intercept integration regressions before shipment.

Education

- **Bsc in Industrial Chemistry (Ongoing) |** Jomo Kenyatta University of Agriculture and Technology (JKUAT)
